To-dos

There are no to-dos at the moment, please check back later

For this participant, this screen indicates that the program has available for viewing 192 sessions, that the participant has already chosen 4 presentations to include in her/his program, that this participant will present two presentations and that she/he has no questions or comments pending (all the above are explained in later slides)

By hovering your cursor over the EHPS 2022 icon you are given the choice to toggle between your dashboard (this page) or the Programme page

By clicking on “view programme”, you can go to the Programme page

By clicking “view my programme” you can go to the list of sessions or presentations you have marked with an asterisk (see following slides

This participant is also an author and can toggle between the two functions by clicking on the down facing arrow

Tuesday, 23 August

All times in EEST (UTC +03:00)

10:00 - 13:00

Morning Workshops

2 parallel sessions

10:00 - 17:00

Full-day Workshop

14:00 - 17:00

We are now in the “Predicting Covid-19 Protective Behaviours” sessions. We can click click on each paper to see the paper’s details we have on the platform.

We will click on the first paper of this session

We are now in the first paper's platform file. Apart from the title, authors and abstract you can see the papers program details, on the right side, and again, in blue the "Join Session" button .

There is also a "Join Discussion" button which will allow participants to leave comments or questions to each paper presenter. The presenter will receive an email every time a comment/question is entered in the discussion field and will have to come back to the discussion field to leave her/his response.

This paper has no video or presentation uploaded to the platform

We will click on the X on the top right side to return to the previous page

Predicting COVID-19 Protective Behaviours

Olivier Luminet

Predicting health behaviors during the COVID-19 pandemic: A longitudinal study from April to July 2021

O. Luminet^{1,2}, M. Schmitz¹, R. Wollast^{1,3}, A. Bigot¹

¹ University of Louvain, Belgium

² Belgian Fund for Scientific Research (FRS-FNRS), Belgium

³ Stanford University, United States

Background: Health behaviors including handwashing, mask wearing, social contact limitation, and physical distancing are crucial for slowing the propagation of COVID-19. We examined predictors of these health
